

# Micron Sizes / 3 in 1 Nozzle

The 3 in 1 nozzle is an adjustable feature for both the Hand Held sprayer VP200ES & Back Pack sprayer VP300ES. This allows you to change micron size with ease to suit whichever environment you are in.  
(40 / 80 indoors and 110 indoors and outdoors)

## Micron Sizes:

### 40 - Cone Nozzle

Intricate areas (offices and desk etc) and around electrical equipment (but not into). Fine mist with the shortest contact time, as the droplets are the smallest and dwell time will be shorter.

### 80 - Cone Nozzle

Used in areas where you need to ensure the dwell time is adhered too. Pest control, kitchens, hospital beds and chairs etc where it still has a fine mist. Therefore, used in most areas along with the 40 micron.

### 110 - Flat / Fan Nozzle

The 110 nozzle is mainly used for either soaking areas or areas that can get wet. (Bathrooms, swimming pools, back of wagons, horse boxes, home deliveries etc) Also this nozzle comes in handy when wanting to cover large areas quickly due to the nozzle type.
