

## Infection Prevention in the agriculture sector

### The Method;

**Electrostatic disinfection will secure all spaces within seconds, with a 100% coverage everywhere. Even under, behind and places you normally wouldn't reach.** Statically charged droplets of the disinfection, attracts like millions of tiny magnets to each other. This will give a supreme 360 degree coverage everywhere.

You don't have to enter the boxes, and could disinfect the total area of a room and stop all spread of infection in seconds. Terminator electrostatic ULV fogger(attached) has a **range of approximately 49 feet, and covers 8000 square meters on one tank.** 80% reduced labour and chemical costs vs traditional methods, and a superior elimination of all contamination.

This method penetrates all material and organic residue, breaks down biofilm and stops infection even without a cleaned surface FYI för. Electrostatic disinfection do not replace cleaning, but is a revolutionary method towards germs and infection.

Penetrates wood, sealing and concrete pores, and even breaks down mold(spores) permanent. The **disinfection 360 is based on 3-4% clinically stabile Hydrogen Peroxide.**

**The gentlest and most efficient disinfection, with a full killrate of all virus, bacteria, fungus and spores.**

Including C-Diff, Cryptosporidium, ringworm, RS-Virus, African swine fever, Bird Flu etc.

Amazing effect on wounds and infections, which mean that both animals and facilities are disinfected at the same time.

**No quarantine time or protective gear, and leaves no residue except for oxygen and water. Food and Animal approved.**

*"If you could save only one animal from early death, this would be the best investment ever."*

## TERMINATOR ELECTROSTATIC ULV SPRAYER

- Batteri operated with good capacity
- 20 meter spray range
- 8000 square meters per tank(10L)
- Changeable Nozzles
- No aerosol or Spray mist
- 100% coverage in 360 degrees in seconds
- 80% reduction in chemical and labour costs
